

Javascript Bootcamp Task: 1

Due Date: 27 May 2026. 07:00 am

Submission: [Task Submission Link](#)

Instructions:

Create .js files for each section and write your code for each section in the respective file. E.g

- variables.js
- datatypes_operators.js
- conditionalStatements_loops.js

Create a new repo on github and name it: **Javascript Bootcamp Tasks: 1**

Push all your work to github and submit the form before **07:00 am, 27 May 2026**.

You can use the main branch for this task.

Exercise 1: Variable Declaration

Variables

1. Declare a variable 'name' and assign your name to it.
2. Declare a variable 'age' and assign your age to it.
3. Declare a variable 'isStudent' and assign it to a boolean value indicating whether you are a student or not.
4. Print all three variables.

Exercise 2: Variable

Reassignment:

1. Declare a variable 'favoriteColour' and assign your favourite colour to it.
2. Print the value of favoriteColour.
3. Reassign favouriteColour to a different colour.
4. Print the new value of favouriteColour.

Exercise 3: Arithmetic

Operations:

1. Declare two variables 'num1' and 'num2' and assign them any two numbers.
2. Declare variables to store the sum, difference, product, and quotient of num1 and num2.
3. Print the results of these arithmetic operations.

Data Types & Operators

Exercise 1: Numbers

1. Declare a number variable and assign an integer to it. Declare a variable and assign it a floating number.
2. Perform addition, subtraction, multiplication, division, modulus and exponentiation with a number variable and another number.
3. Print all your variables.

Exercise 2: Boolean and Operators

1. Use comparison operators to compare two numbers and store the results in boolean variables.
2. Declare two variables x and y with the values 8 and 12 respectively.
 - a. Use comparison operators to check and print the following:
 - b. If x is greater than y.
 - c. If x is less than or equal to y.
 - d. If x is equal to y.
 - e. If x is not equal to y.
3. Declare the variables a and b with values true and false, determine and print the result of the following logical operations:
 - a. a AND b
 - b. a OR b
 - c. NOT a
4. Declare variable p and assign it a value of 10. Use the following assignment operators to modify the value of p with any number and print the result each time:
 - a. +=
 - b. -=
 - c. *=
 - d. /=
 - e. %=

Conditional Statements & Loops

Exercise 1: Temperature check

1. Write a code using if else statements to check the temperature and print a message based on the following conditions:
 - a. If the temperature is below 0, print "It's freezing!"
 - b. If the temperature is between 0 and 15, print "It's cold."
 - c. If the temperature is between 16 and 25, print "It's mild."
 - d. If the temperature is above 25, print "It's warm."

2. Re-write the code using switch Statements.

Exercise 2: Divisibility Check

1. Write a code using if else statements to check if a number is divisible by 2, 3, or both:

- a. • If the number is divisible both by 2 and 3, print
i. "Divisible by both."
- b. • If the number is divisible by only 2, print "Divisible by 2."
- c. • If the number is divisible by only 3, print "Divisible by 3."
- d. • If the number is not divisible by either, print "Not divisible by 2 or 3."

2. Re-write the code using switch Statements.

Exercise 3: For loops

- 1. Print numbers from 1 to 10.
 - 2. Print all even numbers between 1 and 20.
 - 3. Calculate the sum of all numbers from 1 to 100 and print the result. Hint: '+='
 - 4. const numbers = [1, 2, 3, 4, 5]. Given the array of numbers, print each element to the console.
 - 5. const numbers = [3, 7, 2, 5, 10, 6]. Given the array of numbers, find and print the largest number.
- #Hint: current value and previous value.

Exercise 4: While loops

- 1. Print numbers from 1 to 10.
 - 2. Print all even numbers between 1 and 20.
 - 3. Calculate the sum of all numbers from 1 to 100 and print the result.
 - 4. Print all multiples of 5 less than 50.
- # Hint: '%'

Exercise 5: Do While loops

- 1. Print numbers from 1 to 10.
- 2. Calculate the sum of all numbers from 1 to 100 and print the result.
- 3. Prompt the user to enter a number greater than 10. Keep asking until they enter a valid number.
- 4. Create a simple guessing game where the user must guess a number between 1 and 10. The game continues until the user guesses the correct number.
